Services Capstone Description

The Purpose

A capstone project synthesizes all the understanding from your learning during the Starburst Technical Boot Camp. We have boiled the capstone down to four issues that a pretend customer has with their development cluster. Your task is to solve these four issues in a thorough and satisfactory manner through a make-believe “support case”.

The Scenario

You will be assigned a support case via an email from a fake customer to simulate a real customer support case. The rest of the scenario will be described in the support case description.

The Objectives

1. Use your accumulated knowledge from your two weeks of homework and lab time to demonstrate an understanding of the SEP ecosystem and the technical troubleshooting aspects.
2. At the end of the troubleshooting portion of the capstone, you will present your work to your Team Lead and/or peer mentor. In this meeting, be sure to cover the following:
    a. How did you go about resolving the issues?
    b. Why you chose what you chose for the provided fix/workaround?
    c. If you discovered other potential workarounds, describe why those options were tabled (i.e., was it more complex than the provided workaround, did you not feel confident sharing the solution, etc.).
3. You will receive a score from your Team Lead and/or peer mentor which reflects your performance in the capstone project (see scoring details below).

Rules

1. *You alone* must do the work. This is not a team exercise. Feel free to use anything you can find, otherwise.
2. You absolutely cannot search our internal Slack for assistance on the **fourth question/issue**. This is because the solution is well-documented throughout Slack, and it will bypass all of the necessary work to come to a solution on your own.

Scoring

Each required capability is marked out of five, as follows:

Score	Description
5	*Distinction*. All objectives completed, with thorough and high-quality explanations in the presentation. Clear mastery of the material demonstrated.
4	*Good*. Most or all objectives completed, with reasonable explanations, and good understanding.
3	*Acceptable*. Most objectives are completed, with acceptable explanations. It may not have been clear on every point that the student mastered the concept, but the student shows sufficient understanding overall to make it a pass.
0–2	*Unacceptable*. This constitutes a failure. Few or no objectives completed. Explanations are insufficiently complete or of insufficient quality. It is not clear if the student has sufficient mastery of this part of the exercise.

Therefore, the total scoring range is therefore 0–20 (0-5 for each of the three issues you solved), with a **minimum passing grade of 13**. Critically, **you must score at least *3 points out of 5 in every section, with at least one 4 out of 5 rating*,** in order to pass the overall exercise. Note that a grade of 0-2 points in ***any section*** will result in a non-passing grade for the capstone. *It is possible to score 13 or above and still fail to pass the overall exercise.*

Expectations

While you will not be graded on it, we strongly recommend that you begin with a plan, showing how you will spend your time in the week. You don’t have to hold onto this plan, but the reason to do it is to make sure that you have enough time to complete everything. Even one missing section means a failure, so it’s critical to complete all sections. Overall, you are expected to check in with your Team Lead and/or peer mentor at least every 2 days.

Resources

- GitHub – **DO NOT** view the `correct` subdirectory, as this contains all of the answers. This is a trust-based system, and you are entrusted to adhere to these rules. 🙂
- Case PDF – this will be emailed to you after the capstone kicks off.

Submission Instructions

- Zip up your modified version of the broken directory from GitHub along with any notes you took. Ideally, your notes include things like (a) your investigation process, (b) alternative fixes that could resolve an issue, (c) relevant links/resources that helped you arrive to a resolution.
- Send the zip file to @ Vince Nwobodo and/or @ Julian Spring via Slack or email, and we will schedule a short session to review your findings and determine your grade.

Good luck!
